

What is AI?

Artificial intelligence (AI) is technology that enables computers and machines to simulate human learning, comprehension, problem solving, decision making, creativity and autonomy.

What is Machine Learning?

Machine learning (ML) is a **field of study** in **artificial intelligence** concerned with the development and study of **statistical algorithms** that can learn from **data** and **generalize** to unseen data, and thus perform **tasks** without explicit **instructions**.^[1] Advances in the field of **deep learning** have allowed **neural networks** to surpass many previous approaches in performance.
